Masscollabs Services Introduction
# Licenses AGPLv3+ for software GFDLv1.3+ for Documentation

Masscollabs is founded in 22 December 2017 as a Free Software and Open Source Project for foundations, companies and everyone.

# Masscollabs Services Introduction Licenses AGPLv3+ for software GFDLv1.3+ for Documentation

- Our main reason to lead a company is not taking advantage of Free Software and Open Source. What we mean we NEVER EXPLOIT software or people.

- We are a community for other communities and a company for other companies. In other words our culture is called "Ubuntu" which is a person a person for another person.

- For security reason and choice of design which is influenced by FreeBSD and OpenBSD mainly we have three teams within each organization.

- Core Team which leads the organization

- Committers which has the permisson to commit

- Contributors are newcomers and the people will be trained by Core Team and Committers

- Core Team is responsible for all activities including GDPR and KVKK and deleting any harmful information

- Committers are experienced authors and content makers.

- We take it very serious that newcomers/contributors should be ready for their own practices. And that is why our focus is on training for everyone.

# Masscollabs Services Introduction Licenses AGPLv3+ for software GFDLv1.3+ for Documentation

- https://github.com/masscollabs is the Company Organization on GitHub

- On this domain we focus only advanced learning stuff and it's documentation for our teams, and subdomains.

- And also we accept public discussions for company related issues.

Masscollabs Services Introduction Licenses AGPLv3+ for software GFDLv1.3+ for Documentation

- https://github.com/masscollaborationlabs is our lab service for everyone and where we build software, hardware and do research for science, culture and art and all kind of information.

Masscollabs Services Introduction Licenses AGPLv3+ for software GFDLv1.3+ for Documentation

- https://github.com/amassivus is our suite for datacenters and Cloud Providers

- On this domain we include some "third party" software for customizing them within our infrastructure and give back to public.
